MEDICAL SOCKS by Wimpex

Available in the following sizes 37/39, 40/42, 43/45, 46/48

Processing material

Cotton 80%, Nylon 12%, Polyester 5%, Elastane 3% The foot section is terry-knitted for a soft and comfortable feel. The cuff is rib-knitted and processed with elastane, allowing the material to distribute evenly, preventing pressure and avoiding cutting directly above the ankle.

Description

Our safety socks are equipped with a non-slip anti-slip sole to reduce the risk of falls. The sole of the foot is printed with dots in a star pattern made from a specially durable anti-slip material. The Medical Socks have been a fixed part of the hospital supply for patients in Danish hospitals for several years. Experience has shown that patients using these anti-slip socks feel more confident and can rehabilitate faster.

Advantages of Safety Anti-Slip Socks

Our Medical Socks have an optimal fit, and their stability on smooth surfaces can reduce the risk of accidents at home, in hospitals, and in nursing homes. The Medical Socks are equipped with high-quality anti-slip dots for walking with a secure feeling to prevent falls. With their high slip resistance and maximum effect, the Medical Socks can be easily used even during sports exercises and physiotherapy. The Medical Socks and high-quality anti-slip dots provide better slip resistance and grip on smooth surfaces, as well as wet bathroom floors. The Medical Socks are well-suited for children, seniors, and individuals with limited mobility.

Packaging: 100 pairs per carton
